Software Engineer

I am a software engineer who graduated from Maltepe University in Istanbul, Turkey, with a GPA of 3.42. I have knowledge of ReactJS, NextJS, Typescript, Go, Go Fiber Express, NodeJS, HTML, CSS, Bootstrap, Tailwind, Python, Java, Spring Boot, JavaScript, and PostgreSQL. Currently, I am focusing on Full Stack Development, Machine Learning, and Artificial Intelligence.

Specialties: ReactJS, Next JS, Go, Express, HTML, CSS, JavaScript, TypeScript, Python, Java, C#, C

Technologies: Axios, JWT, Redux, Redux-Saga, MongoDB, PostgreSQL, Go Fiber, Bootstrap, Tailwind, React Router, React Context, Selenium, Java Spring, PostgreSQL, React Native

Languages: Turkish (Native), English (C1 – Advanced)

EDUCATION AND COURSES

Software Engineering (100% Eng.) (Bachelor's Degree), Maltepe University	2020 – 2025 (1 Year Eng Prep Class)
Coursera HTML and CSS in depth by Meta Link	29 Hours
Coursera Version Control by Meta Link	12 Hours
Coursera Introduction to Front-End Development by Meta Link	19 Hours
Coursera Programming with JavaScript by Meta Link	38 Hours
Coursera React Basics by Meta Link	28 Hours
Coursera Advanced React Link	26 Hours
Udemy End-to-end React Link	21 Hours
Patika Beginner Level Front-End Web Development Link	77 Hours

EXPERIENCE

FILL LABS- Full Stack Developer (January 2025 – Current)

Currently working as a Full Stack Developer, where I actively contribute to the development of large-scale projects involving both AI powered frontend and backend systems, as well as comprehensive admin panels. I also built an admin panel infrastructure for the company. The daily technology stack includes Go (Fiber), ShadcnUI, Typescript, Next.js, Ant Design (AntD), and SASS.

This role has provided me with practical experience in implementing clean architecture principles, server-side rendering (SSR), and scalable application design. Collaborating with cross-functional teams, I have strengthened my ability to deliver efficient, maintainable, and robust web applications.

JOTFORM- Frontend Developer Intern (July 2024- August 2024)

Completed a mandatory internship at JotForm, where I contributed to the development of a live chat application for JotForm's mobile no-code app builder. The project was implemented using React, WebSocket, Redux, Redux Saga, Reach Router and Styled Components. Collaborating closely with a team consisting of a backend developer, UI developer and UI designer.

In addition to the primary project, I worked on various side projects using Next.js and TypeScript, further enhancing my expertise in frontend development. Through this internship, I deepened my understanding of advanced concepts such as Redux-Saga and monorepo architecture. This experience solidified my passion for frontend development and equipped me with practical knowledge for building scalable and efficient applications.

PROJECTS

UYGUNUNUBUL (2024-PRESENT) [Live](#)

Technologies: React, Redux, Typescript, Redux-Saga, Tailwind, NodeJS (Axios and Cheerio Web Scraping), JSON Web Token (JWT), Scikit-learn, Pandas, NumPy

Description: Personalized house recommendation system using Customized Weighted Distance and Regression algorithms, secure user authentication with JWT, dynamic and weighted property recommendations, web scraping for real estate data, and integration of machine learning models for price estimation and user preference-based suggestions. I design the system and main algorithm for calculating distance between user's inputs and a house. For the frontend part I developed custom atomic components with tailwind and global side effect handling with Redux and Redux Saga.

TALK2NOTE (2024) [Code](#)

Technologies: ReactJS, Tailwind, Axios, React Context, React-Toastify, React-Router-Dom,

Description: A web application where users can create and manage notes, including the ability to record voice notes. The recorded audio is sent to the backend, where it is processed by an AI model that transcribes the content and returns it in Markdown format. Users can view, favorite, and organize their notes efficiently. I was responsible for developing the frontend, implementing context-based state management, integrating with the AI-powered backend, and designing a responsive UI with Tailwind.

CYBER SECURITY FRONTEND (2024) [Code](#)

Technologies: TypeScript, ReactJS, Tailwind, ChartJS, Axios, React-Toastify, React-Router-Dom

Description: It is a frontend dashboard application for the above Cyber Security Backend. With this dashboard you can login, register, see the data received from backend, update your profile, post and edit data.

CYBER SECURITY BACKEND (2024) [Code](#)

Technologies: Express, NodeJS, MongoDB, MITRE Attack, bcrypt, cookie-parser, jwt, mongoose

Description: It is a backend application for MITRE Attack scripts. There are keylogger and local email collection scripts. These scripts collect data from victim's computer and send them to this backend. The backend handles data and send it to the frontend. Authentication & Authorization also implemented in this project.

THESIS MANAGEMENT SYSTEM (2024) [Live/Code](#)

Technologies: ReactJS, Tailwind, React-Icons, JWT Authentication, React-Toastify, React-Router-Dom, Axios

Description: It is a thesis management system for our SE307 class. I contributed the database part and code the whole front end.

DESIGN EDITOR (2023- PRESENT) [Live/Code](#)

Technologies: ReactJS, Fabric, React-Context, Tailwind

Description: It is a useful Canva or CapCut like tool for creating and editing visual designs. With this project, you can create, edit and save designs of various types.

LANDING PAGE (2023) [Live](#)

Technologies: ReactJS, Tailwind CSS, React AOS (animate-on-scroll), i18n

Description: It is a landing page for our YouTube automation project.

DJANGO HOMEWORK SYTEM FRONTEND (2022-2023) [Code](#)

Technologies: Bootstrap, DTL, CSS, HTML, JavaScript

Description: It is a homework system for our university student club.

BMI CALCULATOR (2022) [Live](#)

Technologies: ReactJS, Redux-Toolkit, React-Router-Dom, Local Storage, Bootstrap

Description: It is an app which calculates your BMI.

Other projects on [My GitHub Profile](#).
