Software Engineer

I am a fourth-year student at Maltepe University in Istanbul, Turkey. I have one lecture remaining and will graduate in June 2025 with a GPA of 3.38. I possess knowledge in ReactJS, Express, NodeJS, HTML, CSS, Bootstrap, Tailwind, Python, Java, Spring Boot, JavaScript, and PostgreSQL. Currently, I am focusing on Full Stack Development, Machine Learning and Artificial Intelligence.

Specialties: ReactJS, Next JS, Express, HTML, CSS, JavaScript, TypeScript, Python, Java, C#, C

Technologies: Axios, JWT, Redux, Redux-Saga, MongoDB, PostgreSQL, Bootstrap, Tailwind, React Router, React Context, Selenium, Java Spring, PostgreSQL, React Native

Languages: English: B2,

EDUCATION AND COURSES

Software Engineering (100% Eng.) (Bachelor's Degree), Maltepe University	2020 - Present
Coursera HTML and CSS in depth by Meta Link	29 Hours
Coursera Version Control by Meta Link	12 Hours
Coursera Introduction to Front-End Development by Meta Link	19 Hours
Coursera Programming with JavaScript by Meta Link	38 Hours
Coursera React Basics by Meta Link	28 Hours
Coursera Advanced React Link	26 Hours
Udemy End-to-end React Link	21 Hours
Patika Beginner Level Front-End Web Development Link	77 Hours

EXPERIENCE

JOTFORM- Frontend Developer Intern (July 2024- August 2024)

Completed a mandatory internship at JotForm, where I contributed to the development of a live chat application for JotForm's mobile no-code app builder. The project was implemented using React, WebSocket, Redux, Redux Saga, Reach Router and Styled Components. Collaborating closely with a team consisting of a backend developer, UI developer and UI designer.

In addition to the primary project, I worked on various side projects using Next.js and TypeScript, further enhancing my expertise in frontend development. Through this internship, I deepened my understating of advanced concepts such as Redux-Saga and monorepo architecture. This experience solidified my passion for frontend development and equipped me with practical knowledge for building scalable and efficient applications.

PROJECTS

BMI CALCULATOR (2022) [Live](#)

Technologies: ReactJS, Redux-Toolkit, React-Router-Dom, Local Storage, Bootstrap

Description: It is an app which calculates your BMI.

DJANGO HOMEWORK SYTEM FRONTEND (2022-2023) [Code](#)

Technologies: Bootstrap, DTL, CSS, HTML, JavaScript

Description: It is a homework system for our university student club.

LANDING PAGE (2023) [Live](#)

Technologies: ReactJS, Tailwind CSS, React AOS (animate-on-scroll), i18n

Description: It is a landing page for our YouTube automation project.

DESIGN EDITOR (2023- PRESENT) [Live/Code](#)

Technologies: ReactJS, Fabric, React-Context, Tailwind

Description: It is a useful Canva or CapCut like tool for creating and editing visual designs. With this project, you can create, edit and save designs of various types.

THESIS MANAGEMENT SYSTEM (2024) [Live/Code](#)

Technologies: ReactJS, Tailwind, React-Icons, JWT Authentication, React-Toastify, React-Router-Dom, Axios

Description: It is a thesis management system for our SE307 class. I contributed the database part and code the whole front end.

CYBER SECURITY BACKEND (2024) [Code](#)

Technologies: Express, NodeJS, MongoDB, MITRE Attack, bcrypt, cookie-parser, jsonwebtoken, mongoose

Description: It is a backend application for MITRE Attack scripts. There are keylogger and local email collection scripts. These scripts collect data from victim's computer and send them to this backend. The backend handles data and send it to the frontend. Authentication & Authorization also implemented in this project.

CYBER SECURITY FRONTEND (2024) [Code](#)

Technologies: TypeScript, ReactJS, Tailwind, ChartJS, Axios, React-Toastify, React-Router-Dom

Description: It is a frontend dashboard application for the above Cyber Security Backend. With this dashboard you can login, register, see the data received from backend, update your profile, post and edit data.

UYGUNUNUBUL (2024-PRESENT)

Technologies: React, Redux, Redux-Saga, Tailwind, NodeJS (Axios and Cheerio Web Scraping), JSON Web Token (JWT), Scikit-learn, Pandas, NumPy

Description: Personalized house recommendation system using KNN and Regression algorithms, secure user authentication with JWT, dynamic and weighted property recommendations, web scraping for real estate data, and integration of machine learning models for price estimation and user preference-based suggestions.

DRIVERGUARD (2024-PRESENT)

Technologies: Raspberry Pi, Raspberry Pi Camera Module, OpenCV, Mediapipe, DeepFace, WebSocket, Python, TensorFlow, Scikit-learn, React Native

Description: Real-time driver monitoring system detecting inattention and fatigue using computer vision and deep learning, behavior classification based on eye behavior, head movements, and facial expressions, machine learning model for identifying drowsiness and distraction, secure WebSocket communication for real-time data transmission, and backend reporting with behavioral insights and actionable recommendations.
